

SWAPAHOLIC – A Creative Take in Reducing Textile Pollution

Creator speaks "In Singapore alone, we toss around 150,000 tons of fabric and material waste every year (approximately 120 shirts for each); of which 90% could have been reused somehow or another or structure.

Second, 200 tons of fresh water are utilized to Color 1 tone of fabric. Consequently, "Swapping gives us an alternative to put a conclusion to these hurtful practices and have some good times while doing it. Swapaholic's point is to be manageable every which way. Their methods of insights, their approach, operational systems are altogether customized around the primary standard of zero waste.

III. IMPLEMENTATION

Initial Event flow can be explained as follows:

1. The Customer goes on the Store Portal, buys a subscription and schedules a pickup.
2. During the pickup being schedule, the Origin of the items will be marked as online since these items are going to be delivered at Swapaholic Warehouse from Store Portal
3. The items Origin Status will be used later on to segregate them during the Inventory Storage
4. Once the Pickup has been scheduled, they will follow the route through the Operator Admin (OA) wherein the OA will enter the items into the system. Customers will approve those items after which they will be given to the Inventory Manager to store in the Inventory
5. The Inventory Manager will scan the item, and by the origin, the Inven-to-ry Manager will be able to view the aisles, stacks, and shelves. If the Origin of the Item is Store only then the item will be shown the lo-cation options of Store Inventory.

Fig. 2. Basic Event flow diagram

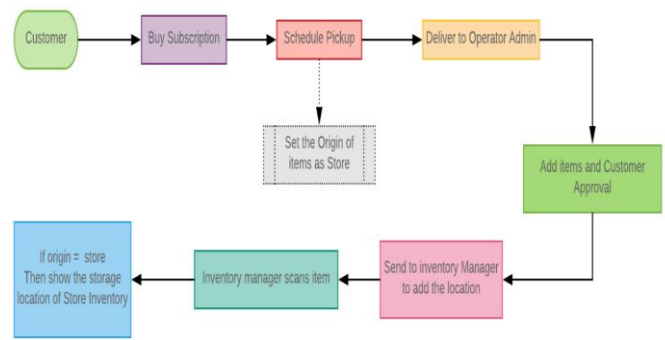

Fig. 3. Detail Event flow diagram

The Detailed Roles of the Operator admin app is as follows

1. Operator Admin
2. Inventory manager
3. Photography app

A. Process Workflow on Operator Admin:

The Operator Admin Role is Adding Items into the System against the respective Customers Pickup Cards and Relocating the items which have been approved by the Customer.

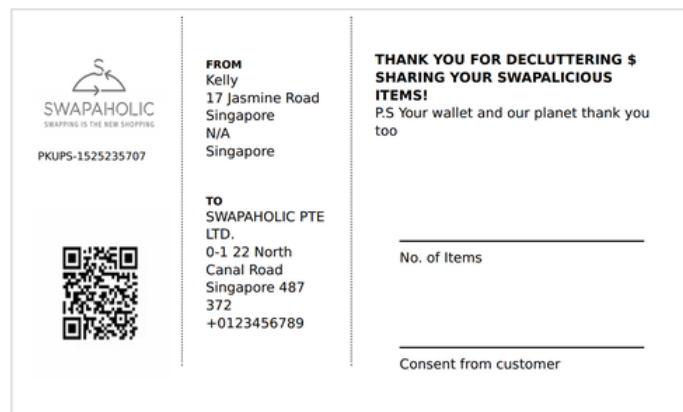

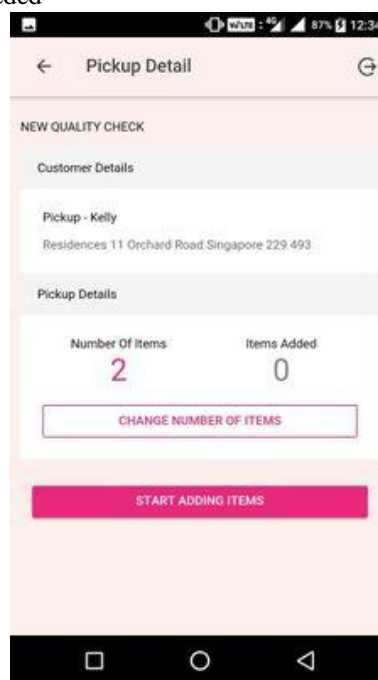

Fig. 4. Process flow diagram of Operator Admin.

The Operator Admin will log in with the Credentials shared with them and will view a screen given below:

4. Once you Scan you will see the Pickups Detail View on which only on the first time scan you will be able to Change the Number of Items that you receive for the respective Pickup if needed

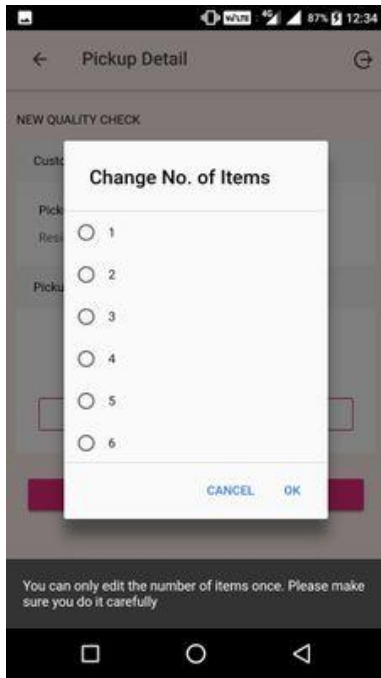

Quality Check Process

1. The Quality Check Process is an essential process since all the items de-tails will be added, and the equivalent points will be calculated and sent.
2. On click of the Quality process, you will be able to see the below-attached Image

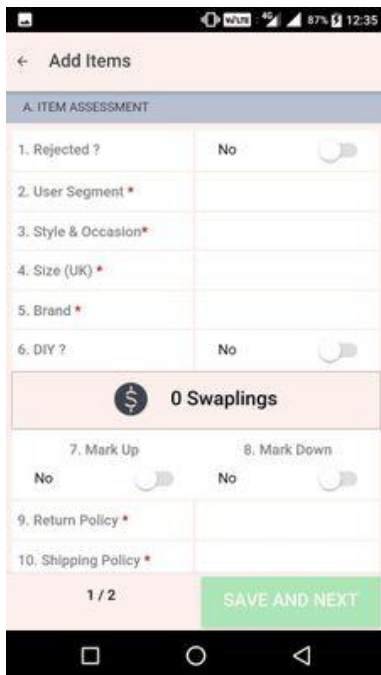

3. You need to Scan the Pickup Cards QR or enter the code that you will be able to find on the Pickup Card as given below.

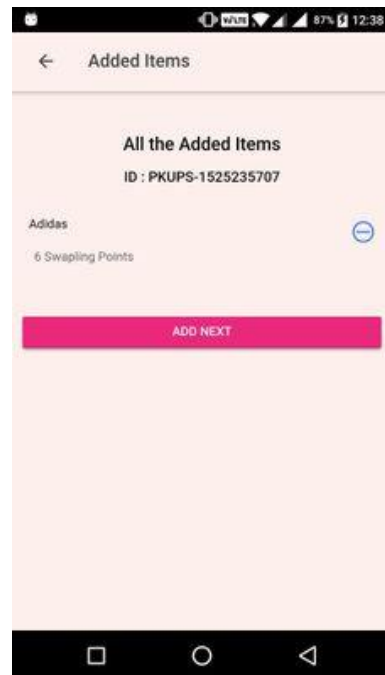

SWAPAHOLIC – A Creative Take in Reducing Textile Pollution

5. Now you will be able to see the additional items view labeled as 'Add Items,' wherein you can add the details of the item.

6. Once all the items have been added, you will be able to see the general gist of all the items added, their Swapping points, if Item has been Marked up or Markdown.

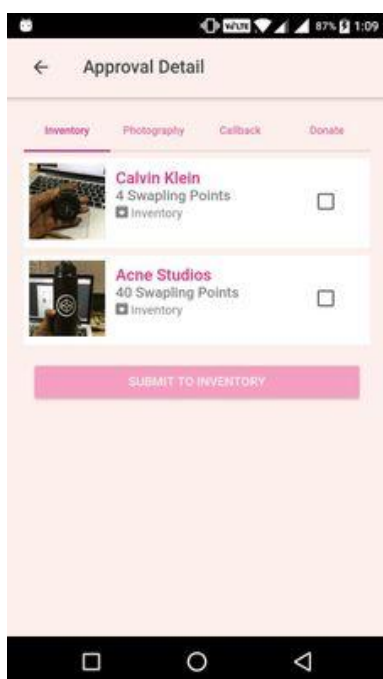

On click of Add Next, the mail will be sent to the Customer about the details of all the items the Customer has given to Swapaholic and the Total Swapping Points.

Approvals Process

The Approvals Process will be the one wherein the Operator Admin will be re-sponsible for segregating all the items according to their statuses after they have received the Approvals on Pickups by the operator admin.

The Operator Admin will see the List of Pickups on Click of the Approvals and can filter and search through them. For reference, it is given below

Those can then be submitted to Inventory for further process.

B. Process Workflow on Inventory Manager Store to Inventory

The Inventory Managers Role is Adding the location of the Items stored in the warehouse, into the System and Relocating and retrieving those items whenever necessary. The Inventory Manager will log in with the Credentials shared with them and will view a screen given below

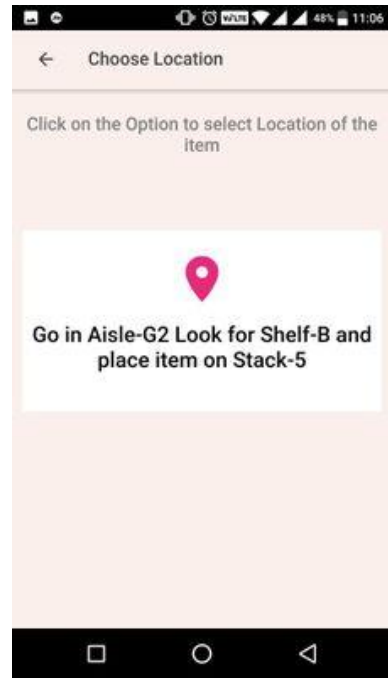

Workflow

1. The Inventory Manager will have a list of items which need to be added to the Warehouse, i.e., Store their location in Inventory.
2. To implement this process, the Inventory Manager needs to Scan the tag/card which will be attached to every item by then by the Operator Admin Itself.

3. Once the Items Card is Scanned if the Location of the item is not previously set then the Inventory Manager will be given the best possible option to choose from.

SWAPAHOLIC – A Creative Take in Reducing Textile Pollution

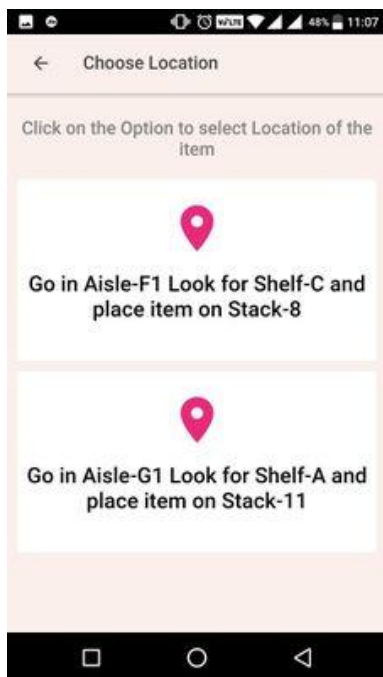

4. If the Item already has a location set, it will ask if the location needs to be updated

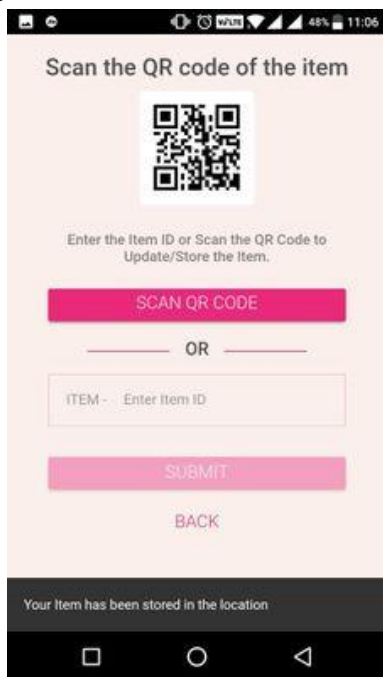

6. If it is available in the system, the Inventory Manager will be given options to choose from locations available

5. Once selected you will be redirected to the view with the Location Option Available, if you need to change the location, you can request a new location if it is available in the system.

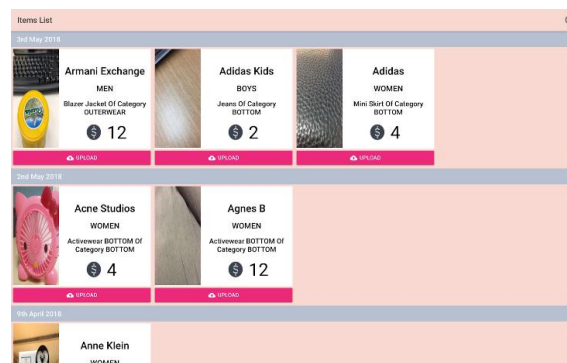

7. Once selected please confirm, and your location for that item is stored

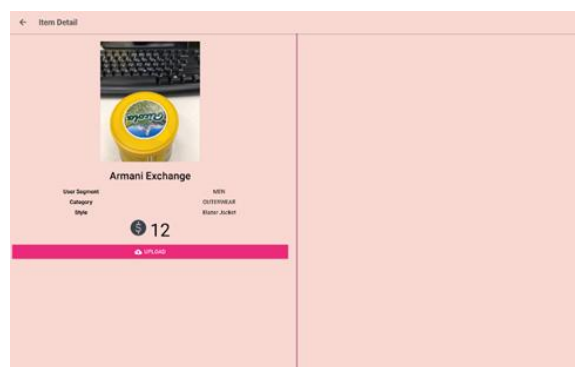

C. Process Workflow of Photography Browser App

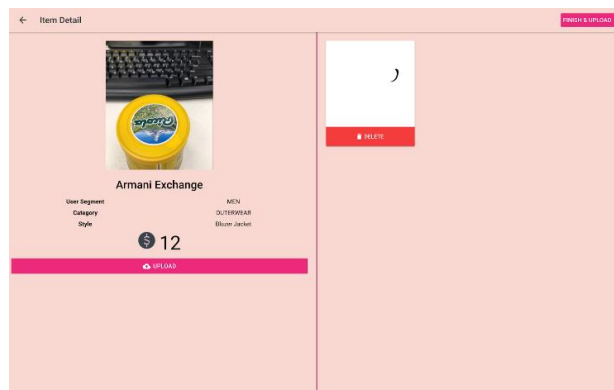

The Photographers Role is Adding Images into the System against the respective items for whom the photoshoot has been completed. Once logged, in the list of the items can be viewed according to the date Operator Admin have added them

You can upload images for the item from the above view. Also, you can go to the detail and upload the same

Once all the photoshoot images for the items are added, please click save/finish and upload button which will be viewed in the header after images are uploaded.

IV. CONCLUSION

Sustainability in the fashion industry if tried can be extremely difficult to achieve, but an extreme effort is being put up. Renting out fashion items is the new way to reduce the pollution caused by the textile industry, in achieving these new technological aspects we worked upon to make this possible.

SWAPAHOLIC – A Creative Take in Reducing Textile Pollution

The new mo-bile application was built to sustain the agility as well as restore the data that needed to be saved. Since saving the environment is a major priority, drastic steps have been taken up to change the psychology of the minds of people. Tak-ing one industry into account, the viable aspect to reduce waste and pollution, Swapaholic has come into existence.

FUTURE SCOPE

The Swapaholic will have an online e-commerce website soon expectedly by around July 2019, wherein the customer who swaps items based on their points will now be able to do from anywhere and everywhere sitting at their home and comfortable environment in exchange for the points they have.

ACKNOWLEDGMENT

I thank Dr. Avinash J. Agrawal for guiding me throughout this project and helping in the publishing of the paper. I acknowledge Ms. Samruddhi Sonak for being my mentor and standing as a professional hand behind this project for me. And my special thanks to the anonymous reviewers for useful comments.
