# A Research on Trading of Sensex Stocks by using RSI

# Sajjan Choudhuri

Abstract—This study has the aim of doing advanced research on technical analysis by finding reliability of buy or sell signals generated by the Relative Strength Index tool. In this study, the RSI tool is tested on Sensex components (30 stocks) for the last six months. The data set for this study had been the daily data, taken from NSE and BSE website. The study compares the return from RSI recommendations and simple buy and hold strategy returns. The study also aims at testing the RSI tool for its probability of generating false buy sell signals. The findings of this study clearly indicate that RSI can be a powerful tool in the markets over buy and hold strategy. The study also makes it clear that the probabilities of false signals are also limited.

Keywords: Relative Strength Index, RSI, Small Cap index, Technical Analysis, Stock Market Analysis

# I. INTRODUCTION

RSI is a technical tool used by traders to trade in stock market.RSI was originally developed by J. Welles Wilder Jr, in his book, "New Concepts in Technical Trading Systems" (1978). It generates buy calls and sell calls by identifying overbought and oversold shares. RSI values oscillates between two extreme values of zero to hundred. A value above seventy indicates that the share is in overbought region and indicates to sell shares. Similarly a value below thirty indicates that the share is in over sold region and indicates to buy the shares. The RSI can be calculated as

Step 1 100-(100/(1+ (Average gain/Average loss)) The Average is calculated for 14 trading days Step 2

100-((100/(1+(Previous average gain x 13) + current gain)/ (Previous average loss x 13 + Current loss))

# II. LITERATURE REVIEW

Adrian Țaran-Moroșan(2011) had tested basic RSI model and RSI modified model and found out that modified version was more rewarding than the basic RSI model. This empirical study was on S&P 500 for a period of 6 years. The study identifies the future scope is on comparing RSI with buy and

hold strategy. This idea has been used as base for writing this article titled "A study on RSI as a tool for predicting NIFTY".

Revised Version Manuscript Received on July 18, 2019.

**Dr Sajjan Choudhuri**, Associate Professor, Chandigarh University, Punjab, India. (E-mail: sajjan.apex@gmail.com)

Boobalan (2014)conducted a study on shares of five selected Indian companies by using four technical tools including RSI.

The other tools were Candlestick chart, exponential moving average and Moving Average convergence divergence. The study was for a period of three years and it was limited to generation of buy and sell signals. The study concluded that all these tools are capable of generating buy call signal.

Chootong and Sornil (2012) had done a study on Thailand stock market. The study was done on five selected industries in Thailand. They conducted the study for four years' time period. They combined the various charts and indicators and buy and sell signals were studied and found out that combining of trading tools gives superior returns in comparison with using the technical tools individually.

Chitra.R(2011) had done a study on technical analysis on selected 10 shares of energy sector. The study was for 3 year period. Three tools has been tested in this study including RSI. The other tools used were Beta and Moving Averages. The study analysed all ten stocks with the three tools and was successful in generating buy and or sell signals. The author also concluded that these tools can be used to generate trading calls.

Drew F. Knowle(2015) had studied RSI alone as an asset allocation tool and concluded that RSI can generate superior returns with less risk to equity market, bond and hedge funds. The study was for twenty years' time frame. The index that was studied in this article was S&P 500.

Dr.Bhargavi. R, Dr.SrinivasGumparthi and Anith.R(2017)had studied 20 selected stocks from Indian stock market. The study was for three year time frame. RSI was the only tool used for the study. The study analysed use of RSI for long term and short term portfolio decisions. The study concluded that RSI as a successful tool for long term and short term trading.

DusanIsakov and Marc Hollistein(1999) had studied Swiss Bank Corporation General Index for 28 years' time period. The study analysed three technical tools including RSI and compared with buy and hold strategy. The study concluded that significant returns can be generated by these tools over simple buy and hold strategy.

HemalPandya (2013) has analysed five selected IT stocks for two year time period with seven tools. The technical tools used were Line chart, Column chart, Stock chart,

Exponential moving average, Moving average

# A Research on Trading of Sensex Stocks By using RSI

convergence divergence, Relative strength index and Rate of change. The study concluded that these technical tools are rewarding to investors.

Krishna Murthy Inumula (2017) had studied Indian stock market for a period of three years. Two technical tools had been used in this study, ie RSI and MACD, As a contradiction to the theory, the study concluded that buy and hold strategy is more profitable than using of technical tools of MACD and RSI. This another research gap in the field of study to evaluate whether its technical tools are rewarding or a buy and hold strategy. This research gap was also included in this study.

HitendraLachhwaniand BhaveshKhodiyar(2013) had studied the profitability of three technical trading tools. The tools that had been studied are moving averages, MACD and RSI. The study was on CNX Nifty for a time frame of ten years. The researches had found out that RSI is a superior tool in comparison with MACD and moving average tools.

Lorenzo Newsome and Dr. Pamela A. Turner (2007) studied monthly returns of ETFs with RSI tool for six year time frame. The study found out that RSI cannot be considered as a superior tool over hedge fund returns. In short the returns generated by RSI tools had completely failed before returns generated by hedge funds.

MohdNaved and PrabhatSrivasthava(2015) had studied CNX nifty with three technical tools. The technical tools used by this study are RSI, CCI and stochastic Oscillator. The study found out that all these three tools as rewarding, but concluded that CCI was superior tool in comparison with RSI and stochastic Oscillator. The study was for a period of 10 years.

PanagiotisRousis and Spyros Papathanasiou (2018) studied three technical tools in Greece Stock market for one month period. The study included three technical tools, RSI, MACD and Stochastic Charts. The study concluded that it is worth to use technical tools of RSI, MACD and Charts for trading.

Pushpa BV, Sumithra C.G, MadhuriHegde (2017)had studied nine stocks of diversified sectors for six years period by using three technical tools. The tools used were Bollinger bands, RSI and MACD. The study concluded that the technical tools including RSI are rewarding and generating buy and sell signals.

Vimala.s, Saranya.P.B,Saranya.R (2014) The study is descriptive in nature and identified RSI and the overbought and oversold positions. The study was for a period of nine months

Valarmathi A, Kowsalya P (2016) studied 5 selected IT companies for five months. They used RSI and Exponential Moving Average. The study concluded that RSI and EMA are rewarding and both are ideal for short term and long term trading.

Wong, Wing Keung, MeherManzur, and Boon-KiatChew (2010) studied STII for twenty one year's using the tools of RSI and moving averages. They found out that technical tools

produced superior returns in comparison with buy and hold strategy.

This literature review has categorized articles into two sections. That is those studies which concluded that RSI is a useful tool and those studies which concluded that RSI is a useless tool. Majority of the literature are in favour of RSI.

#### III. RESEARCH METHODOLOGY

## 3.1 Research Objectives

- 1. To study the signal generating capacity of RSI on Sensex stocks
- 2. To Compare the trading results between buy and hold strategy and RSI

# 3.2 Hypothesis

H<sub>0</sub>= Profits of buy and hold strategy and profits by RSI are equal

 $H_{l} \! = \! Profits$  of buy and hold strategy and profits by RSI are not equal

### 3.3 Population, Sample & Sample selection

The population under study is the Sensex components. Sensex is an index of thirty stocks and this study had considered all the Sensex components. In short the population and sample are same for this study.

#### 3.4 Period of study

The period of study is six months (01/07/2018) to 31/12/2018

# 3.5 Data source

The returns for analysis are manually calculated in excel sheet for each company. The same method is used for calculation of profits by RSI and calculations of profits by buy and hold strategy. RSI data of thirty companies for six months was taken from secondary sources.

# 3.6 Identifying buy and sell call by RSI

This study is focusing on trading rather than investment following assumptions was made in this study.

Shares are bought when RSI is < 30 (Buy call)

Shares are sold when RSI > 70 (Sell call)

Trading is based on T+2, so they cannot hold shares infinitely or till a reverse signal from RSI is generated. So the strategy applied here is that a share bought today is assumed to be sold on settlement date. The daily closing price of BSE is used for all calculations. No brokerage was assumed in this study. A study with brokerages may give a different result.

# 3.7 Identifying buy and sell call by buy & hold

Similarly for the profits of buy and hold strategy, theshares are bought on opening day of the period and sold on closing date of the period.

# IV.DATA ANALYSIS&FINDINGS & RESULTS Table 1: Data analysis summary on calls and profits

Name	No of buy calls	No of sell calls	Result from buy call (a)	Result from sell call (b)	Result by RSI (a-b) (A)	Profit by Buy and hold method (B)	Excess gain (A-B)

TCS	01	19	0.83	11.18	12.01	02.25	8.93
Vedanta	05	00	-1.46	0	-1.46	-15.7	14.24
Yes Bank	15	11	47.64	(2.92)	44.72	-46.5	91.22
	178	174			64.43	-66.55	

This study was for a period of 6 months from 01/07/2018 to 31/12/2018. The study on RSI was done on all 30 stocks which comprise the BSE Sensex. In these six months there were 124 trading days and the RSI tool has generated 178 buy calls and 174 sell calls. Out of 178 buy calls the highest number of calls were on Tata motors, 20 calls and out of the 174 sell calls, highest number of sell calls was on Bajaj Finance. The most profitable company by RSI was Yes Bank (profit of 45%) and least profitable company by RSI was Tata Motors (Loss of 18%). The Most profitable company by buy and hold strategy was ICICI Bank ( Profit 0f 29%) and the

least profit making company by buy and hold strategy was Yes bank ( Loss of 46.5%)

If the trader has used RSI tool the net result would be that he would have made profit of 64% in six month while a passive buy and hold strategy fetches only a loss of 66.55%.

Out of 30 companies studied ten companies were in loss by RSI Method and nineteen companies were in profit or neutral result. But in buy and hold strategy only fourteen companies were in profit, meanwhile sixteen companies were in loss.

Eight companies generated negative results in both strategy and eleven companies generated profit in both strategies. Remaining eleven companies produced mixed result in these two trading strategies

This case of excess return was tested empirically by T test with 95% confidence and the calculated value is 16.25 and the table value for the same is 1.699. As Calculated value is higher than table value, the null hypothesis of the study " $H_0$ = Profits of buy and hold strategy and profits by RSI are equal" is rejected and the alternative hypothesis of " $H_1$ = Profits of buy and hold strategy and profits by RSI are not equal" is accepted.

### V. CONCLUSION, AND RECOMMENDATIONS

This study has achieved both the objectives of the study. The strategies were able to generate sufficient trading calls and a detailed comparative study of the both strategy was done in detail. The study empirically proved that returns by RSI are much higher than simple buy and hold strategy. At the same time this study assumed that trading is done through online sites with zero brokerage. But if the same study is done with brokerage may give a different result. This study confirms to the majority literature as in the literature review which accepts RSI as a useful trading tool. The same study with a lengthier period and different filtering can result in a different result. Time and period of study was the major limitation of this study. A detailed study with a lengthier duration can throw much light into this trading strategy and can be useful for the traders and academia.
